Alternative Image Search Engines

We all know how easy Google Images is to search, but we all have faced the problem that Google Images are often blocked by the school server. These are two alternatives for images that should allow your students to search copyright free images for projects.

#1 CompFight

1. Go to www.compfight.com
2. Put in a search term and when the results come up, you have the choice to click on Creative Commons on the left hand side. This will show only those images that are copyright free.

#2 Icon Finder

1. Go to www.iconfinder.com
2. You can either enter a search term or browse their icon sets.
3. You can find all kinds of icons from businesses, organizations, etc.
4. Students will not be able to download the images, but they can right click and copy and paste the images.
5. You can change the licensing filter with the pull down menu at the top.
